### ***A Special Thank You!***

The pre-meeting Trainee Workshop is supported by a Special Project award from the Society of Biological Psychiatry. The APPA is grateful to the SOBP for recognizing the significant overlap in the missions of the two societies and for their support of this Workshop for the second consecutive year.

## SCIENTIFIC PROGRAM

### Diversity and Inequity in Mental Health: Social-structural, Cultural, Psychological, and Biological Mechanisms

For decades, community-based studies have indicated variation in psychopathology across social groups stratified by socioeconomic status, ethnicity, race, gender identity, sexual orientation, and disability. Some variation suggests diversity: complex differences in prevalence, symptom expression and severity, coping and resilience, illness models, and measurement factors that do not necessarily favor socially dominant groups (e.g., lower-than-expected prevalence of many disorders among minoritized and marginalized groups combined with higher chronicity and disability). The mechanisms of this variation remain unclear. Some differences in mental health – such as those associated with structural racism and sexism, socioeconomic status, homophobia, or transphobia – are clearly inequities: preventable and unjust social practices toward oppressed groups that lead to worse mental health, burden of disease, and outcomes as well as poorer availability and quality of care. In the 2024 APPA annual meeting, we aim to identify gaps in research on the mechanisms that interact across social-structural, cultural, psychological, and biological levels to create and sustain these patterns. Our goal is to help guide next research steps and prevention/intervention efforts.
